FOR QUESTIONS 41 TO 45, READ THE PASSAGE AND ANSWER THE QUESTIONS THAT FOLLOW.

The atomic bombing of the Japanese cities of Hiroshima and Nagasaki in August 1945 stands for maybe the most important and evil development in warfare in the 20th century. By the early 1940s, scientists in Britain and the USA were rapidly developing the technology that would lead to making of an atomic weapon. This research conducted under the deepest secrecy for fear of Nazi scientists, who could go to any length to obtain the necessary data to enable them to produce a weapon of their own. For whatever ulterior motive, Hiroshima became the target of the first weapon fired at 08.15 hrs on 6th August 1945. The all clear had in fact sounded from an initial alert when the bomb was dropped. It was carried by a B-29 super fortress called 'Enola Gay', and exploded about 602 yards over the city producing the equivalent of 15 kilotonnes of energy. Eyewitnesses reported seeing a parachute falling followed by a blast of intense heat.

Between 130,000 and 200,000 people either died, or were injured, or disappeared. The Japanese government attempted to play down the shock and significance of this gloomy development, which was followed a few days later by a second atomic bombing. This weapon had been destined for Kokura on the southern Japanese island of Kyushu, but the cloud cover forced the crew to attack

their secondary target of the shipyards of Nagasaki. The Nagasaki bomb was of about 20 kilotonnes but did less damage because of the local topography. It exploded above Urakami to the north of the port. The injuries and destruction from the two bombs resulted from three reasons: the intense blast, similar to that from conventional weapons but on a much larger scale; thermal radiation, causing burns and producing fires; and nuclear radiation, which caused death and injury from damaged tissues. Even though more people died during the war in Tokyo, but the atomic bombings were significant because they caused death on a huge scale from one bomb dropped by one plane. Hiroshima and Nagasaki remain effective symbols and a sterile controversy over the use of the atomic weapons continues. In purely armed forces terms, the bombs proved critical in persuading the Japanese government to think the unthinkable and accept defeat.

41. Nazi scientists _____ .
- (A) were trying to put the World War II to an end
 - (B) were eager to go to Japan and learn how to make bombs
 - (C) were experts in making nuclear bombs
 - (D) wanted to steal the data from British and Americans to produce a nuclear bomb
42. The dropping of the nuclear bomb on cities of Hiroshima and Nagasaki _____ .
- (A) caused innumerable deaths and destruction

- (B) did not kill many people, as the bombs misfired
- (C) was used as a warning sign for the Japanese by the Americans
- (D) made world aware of the benefits of nuclear warfare

43. The impact of deaths in Tokyo was more _____ .
- (A) during the endless bombings during World War II
 - (B) because of the bombings over Hiroshima and Nagasaki
 - (C) due to epidemics that were affecting the war torn areas
 - (D) none of these
44. In the passage 'sterile' is used for _____ .

- (A) melancholy
 - (B) miserable
 - (C) ominous
 - (D) cheerful

FOR QUESTIONS 45 TO 50, READ THE PASSAGE AND ANSWER THE QUESTIONS THAT FOLLOW.

People who run barefoot learn to minimize impact shock, adopt a different style of running from those people who run in shoes, according to a research. This could help us to understand the impact related injuries suffered by a high percentage of runners. Daniel Lieberman and colleagues at Harvard University used kinematics and kinetic analysis to observe runners who were either habitually barefoot or who

generally wore shoes. Both groups were asked to run wearing shoes and barefoot. High-speed camera footage was used to observe exactly how their feet moved. They also got volunteers to run over a force plate, to analyse how forces were transmitted during different kinds of running.

There are three ways your feet can land when you are running – landing on the heel first, when the heel and ball of the foot land simultaneously, when the ball of the foot lands before the heel comes down. Sprinters and the habitually barefoot seem to use mainly forefoot or mid-foot strike, while endurance runners (and the majority of joggers) use rear-foot strike.

Landing on the forefoot first, helps to reduce the amount of the body's mass that needs to come to a full stop per step, and considering that most runners will strike the ground around 60 times per kilometre, this is significant for the likelihood of developing repetitive stress injuries. Humans and their ancestors have probably been running ever since we adapted to using our lower limbs for movement, and only in running shoes for the last 40 years or so. Evidence from the structure of the modern human foot suggests that it is adapted to get the best out of forefoot strike running, reducing the likelihood of stress injury and offering a selective advantage. As the incidence of running injuries remains significant despite advances in footwear technology, it seems that even the best shoes may not be as good for you as no shoes at all!

46. What minimizes the injuries related to running?

(A) Running slowly

(B) Running barefoot

(C) Running with extra cushioned shoes

(D) Running on soft grass

47. In the given passage, the word 'sprinting' means _____.

(A) running

(B) having a cold drink

(C) trying to print something

(D) breaking an object into two parts

48. 'Repetitive stress injuries' are _____.

(A) accidents related to stressful life

(B) related to unpredictable injuries to athletes

(C) a form of psychological sadness
mischievous monkey

(D) none of these

49. The word 'ancestors' as used in the passage above means _____.

(A) fore-fathers

(B) forthcoming generations

(C) something old

(D) none of these

50. The given passage _____.

(A) suggests that it is the best to run barefoot

(B) studies the causes of injuries while running

(C) suggests that even after significant advancement in footwear, injuries cannot be reduced in athletes

(D) all of these
